PROFESSIONAL SUMMARY

Aspiring AI/ML Developer with hands-on experience building machine learning applications using Python, Pandas, NumPy, Scikit-learn, and Django. Experienced in data preprocessing, exploratory data analysis, predictive modeling, model evaluation, and integrating machine learning models into web applications. Interested in developing practical AI-powered solutions and expanding expertise in Deep Learning, NLP, and deployment.

TECHNICAL SKILLS

Programming: Python, SQL

Machine Learning: Classification, Regression, KNN, Feature Engineering, Data Preprocessing, Model Evaluation

Data Science: Pandas, NumPy, Matplotlib, Seaborn, Exploratory Data Analysis

Web Development: Django, HTML, CSS, JavaScript

Database: MySQL

Tools: Git, GitHub, Jupyter Notebook, Google Colab, VS Code

CORE AREAS

Machine Learning • Data Analysis • Predictive Modeling • Recommendation Systems • Classification • Model Evaluation • Web Application Development

PROJECTS

Credit Card Default Prediction

[Python](#) | [Pandas](#) | [NumPy](#) | [Scikit-learn](#) | [Django](#) | [MySQL](#)

- Developed a machine learning classification system to predict whether a customer is likely to delay their next month's payment.
- Performed data preprocessing, feature analysis, model training, and evaluation.
- Integrated the trained ML model with a Django web application.
- Built an interface for entering customer information and generating predictions.
- Classified customers into Default and No Default categories.

Movie Recommendation System

[Python](#) | [Pandas](#) | [NumPy](#) | [Scikit-learn](#) | [KNN](#) | [Django](#)

- Developed a movie recommendation system using collaborative filtering techniques.
- Processed user-movie rating data and created a user-item interaction matrix.
- Applied K-Nearest Neighbors to identify similar rating patterns.
- Generated personalized movie recommendations based on user preferences.
- Integrated the recommendation system with Django.

Demand Forecasting System

[Python](#) | [Pandas](#) | [NumPy](#) | [Scikit-learn](#) | [Time Series](#) | [Django](#)

- Developed a system to predict future product sales quantity using historical date-wise sales data.
- Prepared and transformed historical sales data for time-series analysis.
- Created relevant time-based features from historical sales patterns.
- Trained and evaluated forecasting models to estimate future demand.
- Integrated the forecasting model with Django.

EDUCATION

Bachelor of Technology (B.Tech) — Computer Science Engineering

2024 - 2028 — Currently in 3rd Year

Universal Skilltech University

Diploma in Information Technology

2021 - 2024 — Completed

Kala Vidhya Mandir Institution of Technology

RELEVANT COURSEWORK

Database Management Systems • Operating Systems • Computer Networks • Object-Oriented Programming • Machine Learning

ADDITIONAL INFORMATION

Languages: Hindi, English **Interests:** Artificial Intelligence, Machine Learning, Web Development

Availability: Open to AI/ML Internships and Web Development opportunities
